**Vocabulary Definition Wizard**

**XML Document Element or Attribute**

Specify a definition for an XML document element or attribute.

Definition Name:  
Basic salary

Definition Description:  
Basic salary

XML Document Information

Document Type:  
Case

Schema:  
file:///C:/RE-Samples/Loans Processing using Business Rules/LoansProcessor Browse...

Selector:  
/\*[local-name()='Root' and namespace-uri()='http://LoansProcessor.Case']/\*[local-name()='Income'

Field:  
\*[local-name()='BasicSalary']

Type:  
System.Int32

Operation Type

☐ Perform "Set" operation on an XML field or attribute

☒ Perform "Get" operation on an XML field or attribute

Display Name:  
Basic salary

**Vocabulary Definition Wizard**

**Specify the Display Name - XML Document Element or Attribute**

Specify the display name is a two step process. First, specify display names for each parameter and then specify the display format string.

Definition Name:  
Set Income Status

**Step 1 - Specify the Parameter Display Names or Values**

Parameters:

Position	Field/Attribute	Type	Display Name / Value
{0}	*[local-name()='IncomeStatus']	System.String	

[Edit...](#)

**Step 2 - Specify the Display Format String**

The display format string describes how the vocabulary definition is displayed in rule conditions and actions. For example, the display format string for the function "sum(x, y)" can be written as "the sum of {0} and {1}" where {0} and {1} are placeholders for the display names or values of the parameters x and y respectively.

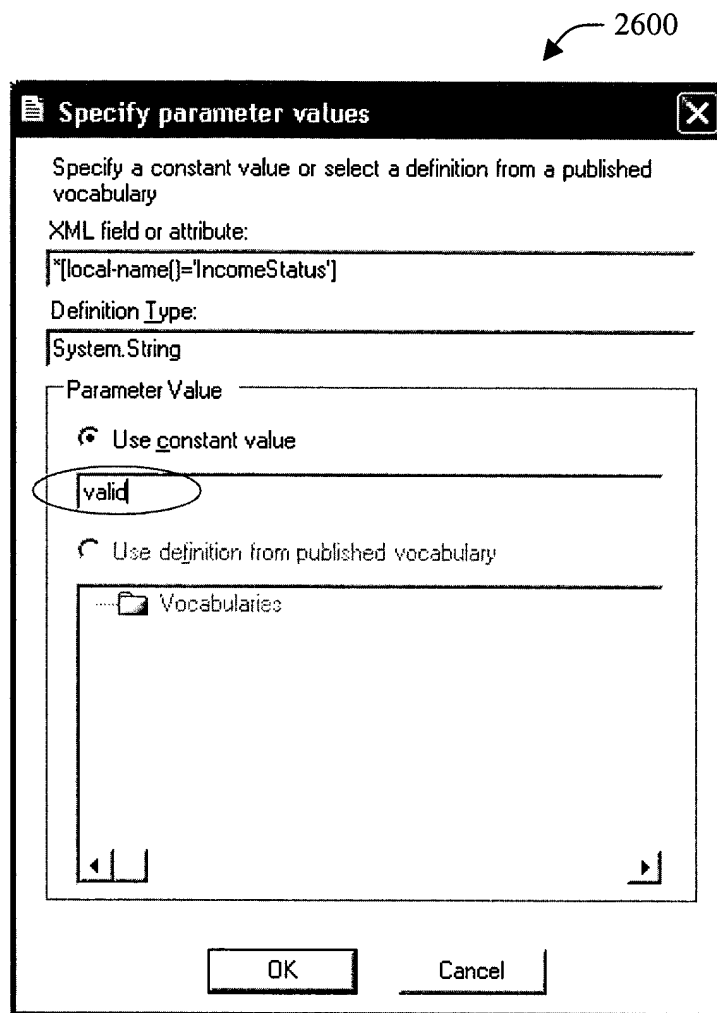

Display Format String:  
Set income status in the incoming case document to be {0} [Default](#)

The definition for "Set Income Status" will be displayed as follows when used in rule conditions and

Set income status in the incoming case document to be <enter a value>
